TERMINOLOGY (A–Z)

Book Value of Stock BV (Slo: KV) – the value of the stock on the Stock Price Board, determined by the number of branches in a chain of the same color.

Branch – a company building.

Chain of branches – two or more branches of the same color linked together.

Charity – funds designated for charitable purposes.

Dividends – money received by the company's shareholders based on the number of stocks You own.

Forced (Fire) Sale – the sale of stocks at half price.

Game Round – the turns of all players in one round, proceeding clockwise.

IPO – listing the company on the stock market (Initial Public Offering).

Lot of stocks – a bundle of five stocks (cards 5 stocks).

Market Maker – the first player of the game round at the advanced level, who reads the Market News and prepares the game round according to its instructions.

Market News – cards with news that, at the advanced level, determine the rules of play for the current round.

Market Price (Slo: TC) – the price of the stocks on the Stock Price Board, determined by the Market News.

My Portfolio (Slo: Moj portfelj) – the tray for storing purchased stocks and money.

My Portfolio Markers:

Purchase Markers marking the quantity of stocks purchased in one round.

Charity Marker – marks the level of your philanthropy.

Portfolio – the collection of all stocks and money you currently own.

Reward for Building – the reward received every time you place a new branch.

Shareholder – the owner of the stocks of a specific company.

Stockbroker – the player who distributes stocks and money throughout the game.

Stockbroker's Set – the box containing stocks and money.

Stock Price Board – the board where stock values are marked.

Stock Price Board Cursors – marking the stock prices on the Stock Price Board:

TC Cursors – mark the Market Price (Slo: TC) of stocks.

KV Cursors – mark the Book Value (Slo: KV) of the stocks.

Stock Trading – the term encompassing the buying and selling of stocks.

Tax Rate – the percentage by which you reduce the final portfolio value at the end of the game.

Tax Relief – a lower tax rate due to charity.

GAME OBJECTIVE

Trade stocks prudently, stick to the stock market saying "Buy low, sell high," and assemble a winning portfolio.

With co-players, you build chains of companies across four main stock market sectors (technology, energy, pharmaceutical, and finance). The more branch a company has in its chain, the higher the value of its stocks.

Placing a new branch office brings you a monetary reward, and all shareholders receive a dividend payout. You use the money received to buy stocks and build your portfolio.

Which and how many stocks you place in your portfolio depends on the timely recognition of opportunities and risks arising from the actions of your fellow players and the stock market news.

You defeat your fellow players if you have the highest portfolio value (stocks and money combined) at the end of the game. At the advanced level, do not forget about charity!

The game ends:

- when the Book Value of Stocks (KV) on the Stock Price Board for any company reaches a value of €100 or
- when the game runs out of branches of one color.

TWO LEVELS OF DIFFICULTY

BASIC LEVEL

The basic level introduces you to stock trading. It is intended for exciting stock market trading battles among family and friends.

ADVANCED LEVEL

The advanced level simulates real market events. It includes Stock Market News Cards, which, in addition to the Book Value (BV), determine new Current Prices (CP) for stocks each round, or otherwise influence the course of the game. The imbalance between the Book Value of the Stocks (BV) and their Current Price (CP) tests you in recognizing buying and selling opportunities. The game also encourages charity.

RECOMMENDATION:

READ THE RULES STEP-BY-STEP. FIRST, TACKLE THE RULES OF THE BASIC LEVEL. ONCE YOU MASTER THE BASIC GAME MECHANICS, MOVE ON TO THE ADVANCED LEVEL – RULES MARKED WITH AN ORANGE LINE ON THE SIDE, WHICH ARE ADDITIONS TO THE BASIC LEVEL RULES.

GAME SETUP

Game setup for four players.

BASIC LEVEL

Place the Game Board, Stock Price Board, and company Branches in the center of the table, within reach of all players.

Place the KV Cursors (Book Value Cursors) on their starting positions at the bottom of the Stock Price Board.

Assemble and distribute the "My Portfolio" trays among the players and place them in front of you. Equip them with the Cursors for the quantity of stocks purchased in the game round.

Designate one person to be the Stockbroker. That player keeps the Stockbroker's Set and is responsible for distributing stocks and money during the game.

Equip the Stockbroker's Set with the 1 and 5 stock cards of all four companies and the banknotes.

Start the game without stocks or money.

ADVANCED LEVEL

Add the Market Maker card to the game. The player who is Stockbroker receives it first.

When you have the Market Maker card, you play according to the following rules:

- Before your turn, you read the stock market news.
- You place the TC cursors (Market Price cursors) on the Stock Price Board or announce the rules of the stock market news for the current round.
- You ensure that all players play according to the rules determined by the Market News card.
- You have the starting and final move of the game round (see GAME ROUND AND STEPS OF YOUR TURN, ADVANCED LEVEL p. 3).
- After the round is finished, you pass the Market Maker card to the next player.

Shuffle the Market News Cards and place them face down along the edge of the Game Board within reach of all players.

Add the TC Cursors (Market Price Cursors) to the top of the Stock Price Board.

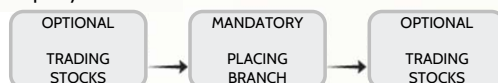

Equip the "My Portfolio" trays with the Charity Markers.

GAME ROUND AND STEPS OF YOUR TURN

The game round proceeds in a clockwise direction. The game round starts with the player you have designated as the Stockbroker.

Steps of your turn:

BASIC LEVEL

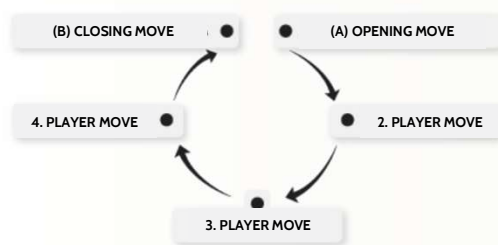

STEPS OF YOUR TURN:

- Before the roll of dices, you can trade stocks.
- You roll both dice and place a new branch.
You receive a building reward equal to the new stock price (KV).
If, by placing a branch, you have increased the company's chain and raised the book value (KV) of its stocks, all shareholders of that company receive dividends.
If you have removed the chains of other companies in the process, all shareholders of those companies (except you) cover the losses.
- After placing the branch, you can trade stocks again.

ADVANCED LEVEL

The game round starts with the Market Maker with his opening move of the round (A) and ends with their closing move of the round (B).

MARKET MAKER – 1. PLAYER

(A) OPENING MOVE

- You read the Market News for this round.
You act in accordance with the instructions in the Market News.
- Before the roll, you can trade stocks.
- You roll both dice and place a new branch.
You receive a building reward equal to the new stock price (KV).

If, by placing a branch, you have increased the company's chain and raised the book value (KV) of its stocks, all shareholders of that company receive dividends. If you have removed the chains of other companies in the process, all shareholders of those companies (except you) cover the losses.

- After placing the branch, you can trade stocks again.

The turns of the remaining players in the round are the same as in the Basic level.

(B) CLOSING MOVE

You do not roll the dice and do not place a new branch!
You only have the right to trade shares again before the end of the game round.

After the round ends, you pass the Market Keeper card to the player on your left, who starts a new game round.

PLACING BRANCHES

DICE ROLL

You roll both dice simultaneously.

The color die indicates which color branch you place. If it shows the white color, you choose the color of the branch to place yourself.

The number die indicates which field you place the branch on. If it shows the Investor symbol, you place the branch on the center space of the game board.

If it is not possible to place the branch according to the rules (there is no space on the field indicated by the number die), you skip this step.

IPO - LISTING A COMPANY ON THE STOCK EXCHANGE

When you place the first branch of a certain color on the game board, you list that company on the stock exchange (IPO). You move the KV cursor on the Stock Price Board to the value of €10. In addition to the building reward (see BUILDING REWARD p. 4), you also receive an IPO reward of €10.

You receive the IPO reward for all four companies only when placing their first branches at the start of the game. If you removed all branches of one company during the game and later placed the only branch of that company back on the board, you do not receive the IPO reward.

ISOLATED BRANCH

If you place an isolated branch during the game, it does not extend the chain of the same color. The company's stock value (KV) on the Price Board therefore, does not increase (except in the case of an IPO or the placement of the only branch). Isolated branches do not increase the stock value but represent potential for future growth.

Example:

The stock value (BV) of the green company is only €10, as it has multiple isolated branches and no chain of two or more branches.

You can not place a branch of one color on a horizontally or vertically adjacent space to a branch of another color (exception: REMOVING BRANCHES). However, you may place it on a diagonal space to a branch of another color.

CHAIN OF BRANCHES

When you add a new branch to an isolated branch or a chain of branches (two or more) of one color, you extend it. At that time, you increase the book value (KV) of the stocks. Every branch in the chain adds €10 to the stock value. All chains of two or more branches of one company (anywhere on the game board) contribute to the total book value (KV) of that company's stocks. Each time you increase a company's chain, you move the KV cursor on the Stock Price Board to the new price.

Example:

The stock value (KV) of the green company in the first image is €30, and in the second image it is €40.

If a company has a chain of branches and an isolated branch, to which you have added a new one, both branches will now be counted towards the total chain and increase the share value by €20.

Example 1:

The stock value (KV) of the blue company in the first image is €20, and in the second image it is €40.

Example 2:

The stock value (KV) of the red company in the first image is €30, and in the second image it is €50.

Chains of branches can have different shapes and can extend across various spaces on the board.

REWARD FOR BUILDING

When you place a new branch, you receive a building reward. If you add a new branch to an existing chain of branches of the same color, you receive a reward equal to the new (increased) stock price (KV). If you place an isolated branch of a company and do not increase the stock price (KV), you receive a building reward equal to the existing (unchanged) value (KV).

DIVIDEND PAYOUT

If placing a branch increases the company's stock value (KV), the Stockbroker pays dividends to all shareholders of that company. The dividend amount is equal to the difference between the new and the previous stock value (KV), multiplied by the number of stocks of that company you own.

$$\text{DIVIDEND} = \text{PRICE CHANGE} \times \text{NUMBER OF STOCKS}$$

Example 1:

The stock value (KV) of the green company increased by €10 (from €40 to €50). You own 5 stocks. You receive a dividend of €50.

$$€50 = (€50 - €40) \times 5 \text{ stocks}$$

Example 2:

The stock value (KV) of the red company increased by €20 (from €70 to €90). You own 15 stocks. You receive a dividend of €300.

$$€300 = (€90 - €70) \times 15 \text{ stocks}$$

REALITY: Companies pay out dividends from the profit they generate by selling products or services, and not when their share value increases. We have developed this method of dividend payout solely for the needs of the game mechanism of receiving money.

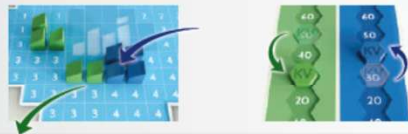

REMOVING BRANCHES

A longer chain of one color can remove a shorter chain of another color. Only when the chain of the color of the newly placed branch is longer than an adjacent chain of another color, may you place the branch on a horizontally or vertically adjacent space to the branch of the other color. By doing so, you have removed the shorter chain. You may remove multiple shorter chains of the same color or different colors at once. Each time you remove a company's branches, you decrease the book value (KV) of its stocks. At that time, you move the KV cursor on the Stock Price Board to the corresponding lower stock value. Each removed branch lowers the stock value by €10. The shareholders of the company with the removed branches pay the loss.

The removed branches are taken out of the game and are not returned to the pile of unplaced branches.

Example:

By placing an additional (fourth) branch of the blue company next to a smaller green chain, you remove the green chain. You must correct the stock prices of both companies accordingly.

If you place a branch on a diagonally adjacent space to a branch of a smaller chain of another company, you do not remove it yet.

COVERING THE LOSS

When you remove a chain of branches of one color, move the KV cursor to the corresponding lower stock value. In this case, all shareholders of that company pay the losses to the Stockbroker.

Before paying the losses, the shareholders of the company that grew receive dividends.

The player who is taking the turn and removed the chain does not pay the loss (even if he is a shareholder of that company).

A loss does not occur if you removed an isolated branch of a company, unless it was the company's only branch. The amount of the loss is equal to the difference between the previous and the new (lower) stock value (KV), multiplied by the number of stocks of that company you own.

$$\text{LOSS} = \text{PRICE CHANGE} \times \text{NUMBER OF STOCKS}$$

Example 1:

You removed the only chain of 3 branches of the green company. Its stock value (KV) dropped from €30 to €0, so the difference is €30. Since you own 5 stocks, you pay a loss of €150 to the Stockbroker.

$$€150 = (€30 - €0) \times 5 \text{ stocks}$$

Example 2:

You removed a chain of 2 branches of the red company, which has another chain of 3 branches on the other side of the board. Its stock value (BV) dropped by €20 (from €50 to €30). Since you own 10 stocks of the red company, you pay a loss of €200 to the Stockbroker.

$$€200 = (€50 - €30) \times 10 \text{ stocks}$$

Example 3:

You removed a chain of 5 branches of the blue company, which still has 1 isolated branch on the game board. Its stock value (BV) drops from €50 to €10, meaning only by €40. Because the isolated branch acts as a shield, the company remains on the stock exchange. You own 15 stocks of the blue company, so you pay a loss of €600 to the Stockbroker.

$$€600 = (€50 - €10) \times 15 \text{ stocks}$$

FORCED (FIRE) SELL

BASIC LEVEL

In the event that you do not have enough money to pay the loss, you must pay the difference through the forced sale of stocks. During a forced sale, you must sell the stocks to the Stockbroker at half their value. You hand the sold stocks over to him.

For the number of stocks sold for each company, you must appropriately move the Purchase Marker on your My Portfolio tray.

Round down the half-value of the sale that is not divisible by ten.

Example:

The price (KV) of stocks you are selling is €30. You own 7 stocks. During the forced sale, you realize: $(€30 \times 7) / 2 = €105$, rounded down = €100.

Stocks with a value of €0 are not listed on the stock exchange and cannot be sold.

If you cannot cover the loss even by selling stocks, you have gone bankrupt, and the game for you is over.

ADVANCED LEVEL

Apply the same forced sale rules as for the basic level, except that you sell stocks for which the stock market news has set Market Prices (TC) at half the Market Price amounts. Stocks with a Book Value (KV) of €0 are not listed on the Stock Exchange and do not have a Market Price (TC).

If the Market News prohibits trading with individual stocks, you cannot sell those stocks.

TRADING STOCKS

BASIC LEVEL

You can only trade stocks of companies that are listed on the Stock Exchange, have at least one branch on the Game Board, and whose Book Value (KV) of stocks amounts to at least €10.

You trade stocks at their Book Value (KV)—as shown on the Stock Price Board at the time of purchase. Within one turn, you can buy a maximum of 5 stocks of each company.

Mark the number of stocks purchased in each transaction on the "My Portfolio" tray immediately. After the end of each round, you return the purchase cursors to their starting position.

Example:

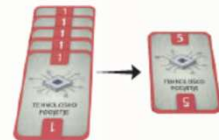

Before rolling the dice, you bought 1 red, 3 yellow, and 5 blue stocks. After placing a branch, you can buy all 5 green stocks, 4 red stocks, and 2 yellow stocks. You cannot buy any more blue stocks.

You may sell any number of stocks that you own. Hand the sold stocks to the Stockbroker.

Place the purchased stocks and money on the "My Portfolio" trays transparently, so that their quantity is visible to all co-players throughout the entire game.

Regularly exchange five individual stocks for bundles of 5 (if these are available).

ADVANCED LEVEL

The same rules apply as for the Basic Level, except when the Market News Card sets Market Prices (TC) for individual stocks or otherwise changes the rules of the game round. In that case, you trade exclusively at the Market Prices (TC) of the stocks or according to the rules set by the Market News Card.

TRADING AS A MARKET MAKER

If, during your Opening Move (A) before rolling the dice, you bought stocks of one company and correctly marked this with the Purchase Marker on the "My Portfolio" tray but then sold stocks of the same company after placing a branch, you move the Purchase Marker back by the number of stocks sold.

If you sold as many (or more) stocks as the Purchase Marker indicates, you return it to the starting position. In this case, you can buy all five stocks of that company again at the end of the round - at the Closing Move (B).

Example:

At your Opening Move A, before rolling the dice, you bought 3 red stocks (you now own 8 in total) and 5 blue stocks (you now own 10 in total). However, after placing a branch, you sold 5 red stocks (you move the red Purchase Marker from 3 to the starting position) and 2 blue stocks (you move the blue Purchase Marker from 5 to 3). Until the end of the game round (during Move B), you can buy 5 more red stocks and only 2 more blue stocks.

MARKET NEWS CARDS

→ Title of the market news simulates actual financial news.

→ The News text is intended for learning business terminology and the topics of financial news.

→ The Game instructions communicate how the game round is prepared. In this case, the Market Maker marks the Market Prices (TC) on the Stock Price Board

Read the first Market News Card at the beginning of the next game round, when all four companies are listed on the Stock Exchange (IPO) – meaning you have placed at least one branch of each color on the Game Board.

After that, before the start of each game round, the next player who becomes the Market Maker opens and reads a new Market News Card. The Market News takes effect before the Market Maker's move (the first player in the round) and is valid for only one game round.

Market News can set Market Prices (TC) for stocks, introduce prohibitions and restrictions, or otherwise affect a specific game round. If they set Market Prices (TC) for stocks, the Market Maker, in accordance with the Card's instructions, places the TC cursors on the Stock Price Board.

KV cursors must not be removed when placing TC cursors!

Regardless of movement of the Book Value Cursors (KV), you do not move the Market Price Cursors (TC) until the end of the game round. The exception is if you have removed all branches of one color and the new Book Value (KV) of that company's stocks is €0. In that case, you must also remove the Market Price Cursors (TC) for those stocks.

After the game round is finished, the Market Maker returns the TC cursors to the starting spaces at the top of the Stock Price Board and places the Market News Card at the bottom of the cards pile.

27. SQUEEZE-OUT OF MINORITY SHAREHOLDERS

If you need funds for the buyout, you may sell stocks of any other company at their current Book Value (KV).

30. ANTITRUST LAW

Since you must preserve the company's Book Value (KV), you may not break chains into isolated branches, as these do not count toward the total stock price.

CHARITY

The Advanced Level expects activities in the area of philanthropy – donating money for various social and environmental purposes. The amounts you donate throughout the game are entirely up to you.

First donation is €20, second €40 and so on. I total you can donate €300.

The donation amounts on the "My Portfolio" tray are determined by the level of charity, which you mark appropriately with a Charity Marker.

You may not skip or combine donation amounts.

You may donate funds only once per move, either before or after rolling the dice. The Market Maker can donate during both moves - Opening Move (A) and Closing Move (B).

More donations bring you a higher tax relief at the end of the game in the form of a lower tax rate on your portfolio's value.

Example:

If you do not donate anything, you pay the full tax rate (25%) on your portfolio's value at the end. If you donated three times during the game (you are on the field €60), you pay only 10% tax on your portfolio at the end of the game. If you donate five times (you are on the €100 space), you pay no tax on your portfolio at the end of the game.

END OF GAME

The game ends on both levels when:

- The Book Value (KV) of any stocks first reaches €100 (by merging two or more additional branches into a chain, the stock price can also exceed €100 in the final move) or
- You place the last branch of one color – meaning you have placed all branches onto the game board. Remember that branches removed from the board are not returned to the game!

In both cases, the game ends immediately. Even if you are in the middle of a game round, the subsequent players no longer take a turn.

Stockbroker distributes the building award and dividends from the last move. The Stock Exchange is closed.

The game does not end if:

- The Stockbroker's Set runs out of stocks of any company or
- The Market Price (TC) of any company's stocks reaches or exceeds €100.

CALCULATING THE FINAL PORTFOLIO VALUE

The player with the highest final portfolio value wins.

If multiple players have the same value of their portfolio, the winner is the one who has a higher total value in stocks rather than in cash.

If there is still no winner, the result is a tie.

BASIC LEVEL

Calculate the value of all stocks you own at the end of the game by multiplying their number by the Book Values (KV) indicated by the BV cursors at the end of the game. Add your cash to this amount, and you will get the final portfolio value.

ADVANCED LEVEL

If individual stocks have Market Prices Cursors (TC) in the final round, remove them and—the same as for the Basic Level—calculate the portfolio value based on the Book Values (KV) of the stocks at the end of the game.

Add the value of your cash to this amount.

Multiply the total value of stocks and cash by the factor, adjusted for the tax rate you achieved through charity:

CHARITY	0 €	20 €	40 €	60 €	80 €	100 €
TAX RATE	25 %	20 %	15 %	10 %	5 %	0 %
FACTOR	0,75	0,80	0,85	0,90	0,95	1,00

and you will get the final portfolio value.

Example:

The final value of your portfolio is €2,500, your charity level is on the €60 space, and you have achieved a 10% tax rate. The final value of your portfolio is thus €2,250.

$$€2,250 = €2,500 \times 0,90$$

GAME SUMMARY (BASIC LEVEL)

The Stockbroker player starts his move. This is the player you have assigned the role of distributing cash and stocks. He has the Stockbroker's Set next to him. Players follow clockwise.

You start the game without stocks or cash.

STEPS OF YOUR TURN:

1. TRADING BEFORE ROLL – BUYING AND SELLING STOCKS

When it is your turn, you can trade stocks—buying and/or selling stocks of all four companies. You can only trade stocks that are listed on the Stock Exchange – their value is at least €10. Within one round (before and after rolling the dice), you can buy a maximum of 5 stocks of any single company in total. You may sell any number of stocks before and after rolling the dice.

Mark the purchase and sale of stocks appropriately with the Purchase Markers during every round.

You need cash to buy stocks. You earn cash in two ways:

- Rewards for building branches and
- Dividend payout.

2. DICE ROLL, PLACING BRANCHES, AND REWARD FOR BUILDING

Based on the roll of both dice, place a new branch on the numbered territory of Game Board.

If you place a branch next to an existing branch or chain of branches (two or more), you increase the value of that company's stocks.

Mark this appropriately on the Stock Price Board – move the KV cursor to the new value of stocks.

You receive a building reward equal to the new stock value.

If you place an isolated branch that is not part of a larger chain, you do not increase the value of the company's stocks.

In this case, you receive a construction reward equal to the unchanged stock value.

3. DIVIDEND PAYOUT

If placing a branch increases the value of a company's stocks, the Stockbroker pays dividends to all shareholders of that company.

$$\text{DIVIDEND} = \text{PRICE CHANGE} \times \text{NUMBER OF STOCKS}$$

3. COVERING THE LOSS

If you remove a chain of branches of one color, move the KV cursor to the corresponding lower stock price on the Stock Price Board. In this case, the shareholders of that company pay losses to the Stockbroker.

$$\text{LOSS} = \text{PRICE CHANGE} \times \text{NUMBER OF STOCKS}$$

The player whose turn it is and who removed the chain does not pay the loss (even if he is a stockholder of that company).

Remove the unplaced branches from the game.

3. TRADING AGAIN AFTER PLACING A BRANCH

After rolling the dice and placing a branch, you can trade stocks again.

Take into account the purchases before the roll that you marked with the Purchase marker in the round.

TIPS

- At the start of the game, take advantage of the IPO opportunity, where only you receive an additional reward.
- Cash does not earn interest, but more stocks earn more dividends.
- Placing branches on numbered fields adjacent to other fields increases the chance of building chains.
- Before placing a branch in a chain, check how many stocks of the company your opponents own, and how many you own.
- Place the branch in the most advantageous way for you (building reward + dividends), even if this allows opponents to receive dividend payments.
- If a company has a chain of branches and one or more isolated branches, it has great potential for growth.
- Always buy as many stocks as possible before rolling the dice. You can sell them after the roll at a higher or the same price.
- Never bet solely on one company; if possible, assemble a portfolio of stocks from all four companies.
- When a larger chain of one color approaches a smaller chain of another color, it may be time to sell to avoid paying a loss.
- Even if you are a shareholder of a company, you can still remove that company's chain. You do not pay the loss yourself.

- A Market Price (TC) lower than the Book Value (KV) represents a good buying opportunity, while a higher TC represents a selling opportunity for those stocks.
- When all four companies have Market Prices (TC) marked and you are the Market Maker, it makes sense to save some cash for purchases during the Closing Move (B) of your round.
- Don't forget about charity – besides having a big heart, it can bring you victory at the end of the game.

The background of the cover features a stylized, colorful bar chart with bars in shades of green, yellow, and blue. A large, light-colored arrow points upwards from the bottom left towards the top right, passing behind the text. In the foreground, there are several 3D cubes in various colors (green, yellow, blue, pink) scattered across the bottom. On the left side, a 3D cartoon character of a man with blue hair, glasses, a white shirt, and an orange tie stands with one hand on his hip and the other holding a fan of colorful cards. The title 'investutor' is written in a bold, blue, sans-serif font, with a small bar chart icon to its left. Below the title, the subtitle 'IGRA BORZNEGA TRGOVANJA' is written in a smaller, blue, sans-serif font.
